

Static, dynamic, and hybrid as lifecycle policies

The policy coordinates are separable over a feasible region; the arms are configurations, not four engines.

Arm	Construction	Freeze	Authoring	Execution
S	before task	persistent	recorded prior	shared substrate
D	task time	continuous	protocol-fixed	shared substrate
H-direct	task time	staged	direct	shared substrate
H-scaffold	task time	staged	scaffold	shared substrate

Scaffold is an authoring method; staging is a freeze policy.
